Application: Backend Developer (Remote, India)

Dear Bjak Hiring Team,

Your posting sets the bar for this role itself: APIs, databases, authentication, queues, jobs, events, and integrations in real production systems, with a debugging, reliability, and data-quality mindset. Over three years of freelance work, every platform I shipped ran in production in exactly those areas, with payment integrations at the center.

How my experience maps to what you will own:

- Payments and money movement through production APIs: on Cashbackwallah, a logistics platform that has processed 1,000+ orders, I built Razorpay signature verification, a wallet and transaction ledger, KYC-gated orders, automated payouts, and scheduled refunds.
- Webhook-driven order and integration flows: payment webhooks, courier and OTP providers, and postback handling with fraud detection on a lead-tracking platform.
- Queues, jobs, and events: Redis, RabbitMQ, and Node.js Cluster powering background jobs and high-concurrency event handling across three production platforms.
- Reliability, debugging, and data quality: ledger-consistent PostgreSQL and MongoDB schema design, automated fraud detection, and live monitoring with Sentry, Prometheus, and Grafana.

I am drawn to what Bjak builds: started in 2019 and headquartered in Malaysia, it became the leading insurance platform in Southeast Asia with over 9 million users, is BNM-approved, and is building the AI Neobank app. Backend services for onboarding, payments, KYC, and risk are the class of problem I have handled for paying customers: money movement and integrations where correctness is not optional.

As a freelance one-person team, I own APIs, databases, deployment, monitoring, and production debugging and fixes myself, making the speed, correctness, and scalability trade-offs your posting asks for; within Bjak's teams, that ownership would go behind shared reviews and faster-moving requirements.

I am based in Mathura, Uttar Pradesh, India, and remote delivery is how all of my production work has been done; given Bjak's fast interview process, I can complete an assessment quickly. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
