Dear CloudSEK Hiring Team,

I am writing to apply for your SDE Intern - Frontend role. I have spent over three years building React and Next.js interfaces in TypeScript and modern JavaScript in production, shipped end to end from components through deployment, and I want to do that inside a product team.

CloudSEK's work is why this posting stood out: founded in 2015 with headquarters in Singapore, building AI threat-intelligence products from XVigil to the AI-native AIVigil. Your careers page says opinions count even on the XVigil UI, and that is how I like to work: close to the product, where UI decisions get debated openly rather than handed down. The frontend problem that interests me most is making dense, fast-moving data readable at a glance. My live leaderboards, real-time tracking dashboards, and status-heavy order flows are the same class of interface, just pointed at threats instead of shipments.

How I match what you are looking for:

- React in production: two platforms shipped on Next.js and React, written in TypeScript and modern JavaScript, including real-time UIs over WebSockets and component-heavy dashboards.
- Component thinking and modern JavaScript: Object-oriented JavaScript with ES6+ as my daily language; interfaces broken into reusable components with Zustand and TanStack Query handling state.
- Engineering rigor: LeetCode 1,430 contest rating, Git workflows and CI/CD in daily use, and Claude Code as my development workflow for coding, testing, and debugging.

Two quick notes on gaps: WebPack, Babel, and Sass are not in my daily toolkit yet, since my builds run on modern React tooling, but they are a straightforward extension of what I already do; my CSS work has been Tailwind and Material UI rather than formal CSS architectures.

On logistics: I can commit to the full 3-6 month duration, join immediately, and work from your Bengaluru office at least 4 days a week, relocating for the internship.

I would welcome the chance to discuss how I would contribute to CloudSEK's frontend from day one.

Kind regards,

Gaurav Chaudhary
