Dear Comviva Hiring Team,

I am writing to apply for your Full Stack Developer (MERN) position on MobiLytix Rewards. For over three years I have built and run production platforms end to end in TypeScript: React interfaces, Node.js and Express services, Postgres and MongoDB data layers, and the CI/CD and monitoring that keep them live.

Your product is a cloud-native B2B loyalty SaaS, and the platforms I have shipped handle the same demands: webhook and payment pipelines, role-based access across accounts, real-time dashboards, and production issues I resolve myself. Comviva's 25+ years of mobility work, 2Bn+ platform users across 100+ countries, and a second consecutive year in the 2025 Gartner Magic Quadrant for AI in CSP customer and business operations make this a scale of problem worth committing to.

How I match your requirements:

- MERN in production: React and TypeScript interfaces with Material UI, plus Node.js and Express REST APIs, shipped across logistics, real-time quiz, and affiliate-tracking platforms with live users.
- SaaS and multi-tenant-style systems: an affiliate lead-tracking platform maintained since 2023, running role-based access, live dashboards, webhook postbacks, and payment flows, plus a logistics platform that has processed 1,000+ orders.
- CI/CD and observability: Git and GitHub Actions pipelines deploying Docker containers, with Prometheus, Grafana, and Sentry for production monitoring and root cause debugging.
- AI / GenAI tooling: AI-assisted development with Claude Code when building and maintaining production code.

I work directly with clients today: requirements in, deployed software out, production issues resolved without anyone in between. That is the ownership your posting asks for across product engineering, tech ops, and DevOps. My portfolio at gauravmrjatt.vercel.app and GitHub show the same production patterns.

I am based in Mathura and open to relocating to Bengaluru for this role.

I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
