Dear HackerKernel Hiring Team,

I am writing to apply for your React or Node Developer position in Bhopal. For over three years I have delivered production platforms independently as a freelance full-stack developer, building the React front ends and the Node.js and Express back ends myself, and I want to bring that end-to-end ownership to your client work.

HackerKernel's own site lists 150+ happy clients and 200+ projects delivered, and the posting describes a 120+ engineer team serving clients across the US, UK, UAE, and Australia. Serving that many clients needs engineers who take a requirement to a shipped feature without hand-holding, which is freelance delivery in one line: I receive a scope, build it, integrate what it needs, deploy it, and keep it running. Your Fast2sms case study, processing more than 10 lakh SMS per day, is the production scale that discipline ends up serving.

How I match what you are looking for:

- React and Node.js together: Cashbackwallah shipped with Next.js, React, and TypeScript in front of an Express.js and PostgreSQL back end, with 1,000+ orders processed.
- APIs and third-party services: RESTful APIs, JSON, and webhook handling with Razorpay, Shiprocket, Firebase OTP, and the Telegram Bot API across live products.
- Schema design: PostgreSQL with Prisma and MongoDB with Mongoose, covering orders, wallets, and multi-level commission ledgers.
- Clean, performant delivery: Git version control, CI/CD, AI-assisted development with Claude Code, and Redis-backed flows that hold up under concurrent load.

I work directly with clients to agree scope and milestones, the same rhythm as your product and agency environment. My B.Tech CSE is in progress (expected 2027), and over three years of freelance delivery is the equivalent practical experience your posting allows. My portfolio at gauravmrjatt.vercel.app and GitHub show the production patterns I would bring.

I am based in Mathura and open to relocating to Bhopal for this on-site role.

I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
