Dear Infosys Hiring Team,

I am writing to apply for the React JS Developer role in your Pune Division. For over three years I have worked as a freelance developer building production React interfaces: a logistics platform that has processed 1,000+ orders, real-time leaderboards for a partner-facing quiz platform, and a collaborative code editor. Your posting's front-end scope - reusable components, REST integration, responsive delivery, and performance across devices - is the work I have already been shipping, and I want to do it inside a large engineering process with shared component libraries and real code reviews.

Why Infosys: your February 2026 collaboration with Anthropic states that Infosys is already deploying Claude Code within its Exponential Engineering organization. That is the same toolchain I use to write, test, and debug code, and I would bring that practice to your React front-end work.

How my experience maps to your requirements:

- React and ES6+ in production: React and Next.js with JavaScript (ES6+) and TypeScript, taking user-facing features from component design through deployment.
- Hooks and state management: React Hooks daily with Zustand and TanStack Query for client and server state, the same container and pattern thinking your Redux mention calls for; I have not used Redux in production, but the patterns transfer directly.
- REST and responsive UI: REST API integration from React frontends (Shiprocket, Razorpay, Firebase OTP) and responsive layouts with Tailwind CSS and Material UI across devices and browsers.
- Code quality: Git version control, documented code, and performance work on live dashboards; Claude Code is part of my development workflow for coding, testing, and debugging.

Two honest calibrations: your 2 to 3 years is matched by over three years of continuous freelance delivery since May 2023, and that delivery has been structured, milestone-based client work rather than formal Scrum teams. I am based in Mathura, open to relocating to Pune, and I would welcome the chance to discuss how I would contribute to your React front-end work.

I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
