Dear Kayla Hiring Team,

I build production Node.js backends end to end: scalable REST APIs, database schema, deployments, and the pipelines that keep them running, delivered over three years of freelance work for Indian clients. That is the core of your Backend Developer (Node.js / NestJS) role at Kayla - apps & ai, HiLITE Business Park, Kozhikode.

Your featured portfolio spans real-time calling apps, ride-hailing with live tracking, and telemedicine for 40+ clients, your stack page lists Node.js, MongoDB, and Next.js, and your partner wall lists Razorpay, Firebase, and AWS. I have worked in all of it: on Cashbackwallah I built the money-movement side, Razorpay signature verification, wallets, payouts, and refunds, on a platform processing 1,000+ orders, the same discipline behind your HYZR and Payweekly apps.

How my experience maps to your requirements:

- Production REST APIs: logistics platform with payment signature verification, wallet ledger, payouts, refunds, and webhook processing (Express.js, PostgreSQL, MySQL, MongoDB, Razorpay).
- Real-time systems: live leaderboards and high-concurrency event handling backed by Redis, RabbitMQ, WebSockets, and Node.js Cluster.
- Deployment ownership: Docker, Git/GitHub, CI/CD pipelines, Linux server management, AWS EC2, and monitoring with Prometheus, Grafana, and Sentry.

My backend services run on Express.js, the same Node.js runtime and API design discipline NestJS builds on, so NestJS is a natural extension rather than a re-learning, though it is not yet in my daily toolkit. Your preferred areas of Flutter mobile backends and Django REST sit similarly adjacent to my full-stack and Python background, and microservices with monorepo delivery are growth areas: my production work is modular workers and queues (RabbitMQ, Redis, Node.js Cluster), not a formally distributed estate. I have delivered solo to date and want the counterweight of a team: shared code reviews and technical discussions.

I am based in Mathura, open to relocating to Kozhikode, and available without a notice period; I will include current and expected CTC by email as your posting requests. I would welcome the chance to discuss taking your Node.js services from API design through deployment. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
