Dear Navi Hiring Team,

I am applying for the SDE I (Frontend) role. Your posting leads with JavaScript and React fundamentals, and that is exactly the base my work stands on: over three years of building React and Next.js interfaces for production systems with real users, shipped end to end as a freelancer, where owning the outcome was the job.

I have been the only engineer on platforms that people use with real money and real stakes: a logistics front end that has processed 1,000+ orders, live quiz leaderboards updating over WebSockets, and affiliate dashboards maintained since 2023. That is the habit I would bring to Navi: engineers get responsibility early and are judged on measurable impact.

How I match the role:

- JavaScript and React fundamentals: closures, scope, async patterns, hooks, props, state, and data flow exercised continuously across three years of production React code in JavaScript (ES6+) and TypeScript; comfortable explaining how the event loop and prototypes work.
- Component architecture: reusable component systems for order, quiz, and dashboard screens, built to translate client requirements into clean, maintainable UI.
- Performance and debugging: data-heavy views (live leaderboards, real-time dashboards) kept responsive under WebSocket event traffic; production errors surfaced and fixed through Sentry monitoring.
- Customer-facing ownership: interfaces where a stuck order or a wrong payout is immediately visible to a customer, which is why I start with the customer's problem and sweat the details before anything ships.

Navi's ``Own the Outcome'' value describes how I already work. I also want a structured frontend team with senior engineers to guide my growth in testing discipline and deeper systems work.

I am based in Mathura, Uttar Pradesh, and I am ready to relocate to Bengaluru and work on-site for this role. I am sending my CV with this application, subject ``Application: SDE I (Frontend)''; I can be reached at +91-8077598311 or gauravmrjatt4@gmail.com.

Kind regards,

Gaurav Chaudhary
