Subject: Application: SDE I - Frontend

Dear Netomi Hiring Team,

I am writing to apply for the SDE I - Frontend role. Over three years I have shipped React and Next.js interfaces in TypeScript for production platforms with real users, owning modules end to end from component to deploy, and I want to bring that ownership to a platform as ambitious as yours.

What draws me to Netomi is the shape of the problem: a no-code platform where brands like Delta, United, and MetLife build, test, deploy, and monitor AI agents for customer experience. That is a UI-heavy B2B SaaS application in the purest sense, and it is the exact class of interface I have been building. How I match the requirements:

- React and TypeScript in production: Cashbackwallah, a logistics platform I built from scratch that has processed 1,000+ live orders, and Dream10, a real-time quiz platform with live leaderboards, both shipped to real users.
- Reusable components and design translation: multi-level commission views, wallet and refund screens, and multi-step KYC flows, built from client requirements and design specs into shared components.
- REST APIs and webhooks: payment signature verification, webhook/postback processing, and integrations like Shiprocket and Razorpay wired through the frontend, the connective tissue of any agent platform.
- Node.js as a working secondary skill: Express.js backends with WebSockets, Redis, and RabbitMQ behind the frontends above, so I can collaborate on API design from both sides.

My workflow is modern and AI-assisted: I use Claude Code for scaffolding, refactoring, and review passes on production code, which keeps delivery fast without giving up care. I am based in Mathura, Uttar Pradesh, India, and since the role is remote within India, I am fully set up for it: every platform above was built and maintained working remote, with Git-based workflows and CI/CD doing the coordinating.

I would enjoy the chance to own UI modules on a platform raising the bar for enterprise customer experience. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
