October 10, 2026

Dear Hiring Manager,

I am writing for the Full-stack Developer role, remote within India, with one of Weekday's clients. For over three years I have built and run production platforms remotely for Indian clients: React and Next.js interfaces with TypeScript, REST APIs in Node.js and Express, and SQL and document databases.

Insurance and fintech application work is what I want next. My closest overlap is the money-movement side: wallet and transaction ledgers, KYC-gated orders, payment signature verification, automated payouts and refunds on a logistics platform that has processed 1,000+ orders, plus webhook and postback handling maintained on an affiliate platform since 2023. Insurance application configuration itself is new to me; the discipline of handling money correctly is not.

How I match your requirements:

- ReactJS and web applications: React, Next.js, TypeScript, HTML, and CSS interfaces shipped across logistics, real-time quiz, and affiliate-tracking platforms with live users; Next.js and API management are current practice, not a ramp-up.
- REST APIs and data: Express.js REST services over PostgreSQL and MongoDB, plus MySQL, covering webhooks, payment flows, role-based access, and real-time dashboards.
- Product ownership: I build and run my own products with real users (CodeLab, Data Vault, Earning Area) alongside client platforms, from requirements through production support.
- AI-assisted development: Claude Code for building and maintaining production code, alongside GitHub Actions CI/CD and monitoring with Sentry and Grafana.

Three gaps, stated plainly: I have not been employed at a product company, I have not built insurance applications, and my production backend is Node.js rather than Python. Python sits in my core CS and scripting background, not in shipped work. What I bring instead is ownership of live systems solo and remote, with direct client communication since 2023.

My portfolio at gauravmrjatt.vercel.app and GitHub show these systems deployed. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
