Dear Zephico Hiring Team,

I am writing to apply for your Retool / Full-Stack Developer position. For over three years I have built and maintained the software behind daily operations: dashboards, admin panels, role-based access, and payment flows, shipped to production and owned end to end.

Zephico is a Databricks Consulting Partner placing certified engineers into North American and European teams from Ahmedabad, with 50+ projects delivered, 25+ happy clients, and Retool Certified Developer among its certifications. Your posting offers to train and certify me in Retool, plus AWS or Databricks certification, and your site lists 3 open roles for engineers in India. That is the internal-tools practice I want to join.

How I match your requirements:

- Internal tools in production: an affiliate lead-tracking platform built in 2023 and maintained since, running role-based access control, real-time dashboards, webhook postbacks, audit-style fraud-detection logging, payment flows, and Telegram alerts.
- SQL and JavaScript: PostgreSQL with Prisma, MySQL, and MongoDB behind my projects, with JavaScript and TypeScript across REST, GraphQL, and real-time WebSocket APIs.
- React rebuilds: I ship complete products in React, Next.js, and Node.js, including a logistics platform that has processed 1,000+ orders, so tools that outgrow Retool land in familiar hands.
- Client ops communication: I work with clients directly today, scoping what to build from the workflow it has to fit and owning what I ship once it is live.

Your product-sense requirement matches how I already work: I ask why before building, then ship a deployed increment instead of a spec. My client work already runs async, so structured US/EU overlap hours fit how I work.

I am based in Mathura and open to an Ahmedabad-based engagement if the role needs onsite time. I am sending this letter and my CV to info@zephico.com with the subject ``Application: Retool / Full-Stack Developer'' I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
