LinkedIn, GitHub, Portfolio

Frontend-heavy Full-Stack Developer with over three years of freelance production delivery for paying clients: React and Next.js interfaces in TypeScript, complex state management in real products with Zustand and TanStack Query, REST API integration, and performance and UX polish that survives live users. Owns features end to end, from a blank repository through data models, APIs, deployment, and monitoring. B.Tech CSE (expected 2027), currently building with AI-assisted workflows and ready to apply that ownership pattern to an AI-powered editor product.

Core Competencies

- **React Application Development**: React, Next.js, TypeScript, component-based architecture - production interfaces across logistics, quiz, and affiliate-tracking platforms with paying users.
- **State Management in Real Products**: Zustand, TanStack Query, REST - client state, server caching, and WebSocket-driven data flows kept consistent in live applications.
- **REST API & Data Model Work**: Express.js services over PostgreSQL (Prisma) and MongoDB (Mongoose) - owns both the interface and the API and schema behind it.
- **Performance & UX Polish**: Tailwind CSS, Material UI, responsive layout - live dashboards and real-time views that stay responsive under high-concurrency event load.
- **End-to-End Product Ownership**: solo delivery including scoping with clients, API design, Docker, NGINX, CI/CD deployment, and Sentry and Grafana monitoring.
- **AI-Assisted Workflows**: Claude Code inside the build-and-maintenance loop for client production code; keen interest in AI-assisted authoring and content-generation features.
- **Client Communication**: direct scoping and delivery in English and Hindi for three paying clients since 2023; turns ambiguous requirements into scoped, shipped features.

Professional Experience

Cashbackwallah — **Remote / client project**
Freelance Full-Stack Developer — *Jan 2026 - Aug 2026*

- Built and shipped the frontend of a logistics platform for paying users (React, Next.js, TypeScript, Tailwind): courier rate comparison, shipment booking, order management, and multi-level franchise commission views - 1,000+ orders processed.
- Owned feature state end to end: complex order and wallet flows, KYC-gated screens, and payment, payout, and refund views; REST integration with Shiprocket, Razorpay, and Firebase OTP, with signature verification and webhook processing behind them (Express.js, Prisma, PostgreSQL).
- Handled deployment and DevOps for the whole platform: Docker, NGINX, and GitHub Actions. Demo: cashback-wallah.com

Dream10.in — **Remote / client project**
Freelance Full-Stack Developer — *Mar 2025 - Nov 2025*

- Shipped a production real-time quiz platform to partners (Next.js, React, Node.js, Redis, RabbitMQ, WebSockets): live leaderboards, anti-cheat flows, and automated payment and payout screens.
- Kept the interface responsive under high-concurrency event load by tying WebSocket-driven state directly into React views; managed CI/CD deployment. Demo: dream10.in

Lead Tracking System — **Remote / client project**
Freelance Full-Stack Developer (Ongoing Maintenance) — *May 2023 - Present*

- Built an affiliate lead-tracking platform (2023), still maintained and extended on demand: real-time dashboards, automated fraud detection, webhook/postback handling, Telegram alerts, and role-based access control.
- Scaled background processing with RabbitMQ, Redis, and Node.js Cluster; implemented production monitoring with Prometheus, Grafana, and Loki. Demo: panel5.logicpay.in

Independent Projects

- **Independent project**
  CodeLab *Jun 2025*
  - Real-time coding rooms with Yjs CRDT synchronization and WebSockets, plus customizable layouts and contest timers.
  - Docker-sandboxed code execution service with testcase and contest management (Next.js, Node.js, Express). Demo: codelab.logicpay.in

- **Independent project**
  Data Vault *Mar 2025*
  - Privacy-focused file manager (Next.js, Node.js, MongoDB, Telegram Bot API) with chunk-based encrypted storage, Telegram-backed distributed storage, and resumable uploads.
  - Secure file sharing with search, pagination, and folder organization. Demo: datavault-two.vercel.app

- **Independent project**
  Earning Area *Aug 2021*
  Gamified rewards platform (PHP, MySQL, Paytm API): task-based earnings, referral system, Paytm and OpenMoney payouts, scratch cards, and automated reward distribution; my first end-to-end payment integration, built in high school. Demo: earningarea.org

Education

- **GLA University** **Mathura, India**
  B.Tech in Computer Science and Engineering *2023-2027*
  In progress, expected 2027. Key topics: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Languages

- Hindi (native), English (professional working proficiency).

Honors and Awards

- **Finalist** - WebX Frontend Challenge (2024).
- **4th place** - WebForge (2025).
- **4th place** - Code Arambh (2024).
- **AWS Cloud Computing Certification** - JOVAC, GLA University (2025).
- **LeetCode** - 1,430 contest rating.
