Dear Bain & Company Hiring Team,

I am applying for the Associate (Frontend Developer) role in the Customer Center of Excellence team in New Delhi. Over three years of freelance delivery I have built and shipped production React and Next.js frontends for clients end to end, and I am looking to bring that client-facing ownership into a consulting environment.

Recent work that maps to the role:

- Frontend for a live logistics platform (Cashbackwallah, cashbackwallah.com): a Next.js 16 and TypeScript client integrated against 145 REST endpoints backed by 23 Prisma models, covering courier rate comparison, booking, order management, and a multi-level franchise commission flow with role-based access; 1,000+ orders processed.
- Admin dashboards maintained for 3+ years (panel5.logicpay.in, open source): real-time dashboards, fraud alerts, and a role-based access control UI over a 107-endpoint API kept fast by Redis-cached hot reads.
- Real-time UI for Dream10.in: live leaderboards and WebSocket-driven screens wired to automated payment and payout flows.

Bain's Customer CoE builds web applications for consulting clients, which is the work I have been doing as an independent developer: short iterations with a client, a demo, feedback, and the next slice shipped. I am comfortable owning a frontend from component design and state management through API integration, testing, and deployment, and I communicate trade-offs plainly to non-technical stakeholders. I am based in Mathura, Uttar Pradesh, and will relocate to New Delhi for this role.

I bring a strong computer science foundation (B.Tech CSE, expected 2027; LeetCode 1,430 contest rating) and a frontend focus sharpened by a WebX Frontend Challenge finalist finish. I am particularly interested in applying my experience with dense, data-heavy interfaces (logistics dashboards, real-time leaderboards, role-based admin views) to the client-facing work at Bain.

Kind regards,

Gaurav Chaudhary
