Dear Capco Hiring Team,

I am applying for the Frontend Developer role in Pune. Over three years of freelance delivery I have built and shipped production React and Next.js frontends for clients end to end, which is the core of what this role asks for: modern, scalable, high-performance web applications.

Recent production work that maps to the role:

- Frontend for a live logistics platform (Cashbackwallah, cashbackwallah.com): a Next.js 16 and TypeScript client integrated against 145 REST endpoints backed by 23 Prisma models, covering courier rate comparison, booking, order management, and a multi-level franchise commission flow with role-based access; 1,000+ orders processed.
- Admin dashboards maintained for 3+ years (panel5.logicpay.in, open source): real-time dashboards, fraud alerts, and a role-based access control UI over a 107-endpoint API kept fast by Redis-cached hot reads.
- Real-time UI for Dream10.in: live leaderboards and WebSocket-driven screens wired to automated payment and payout flows.
- Component libraries: an 80-component file manager (Data Vault) and a 63-component personal site, built for reuse and consistency.

Your posting asks for a Frontend Developer to build modern, scalable, high-performance web applications supporting large-scale digital transformation for global enterprises across banking, financial services, insurance, payments, and energy. That is the work I have done on every project: I chose the stack, designed the reusable components, and checked every change against its production consequences before shipping.

Capco's consulting model, delivering digital solutions for financial-services clients, is the kind of environment where frontend ownership matters: clean component architecture, predictable state management with hooks, Context API, Zustand, and TanStack Query, and careful integration against REST APIs, with performance handled through caching and sensible loading states.

I am based in Mathura, Uttar Pradesh, and am open to relocating to Pune for this role.

Kind regards,

Gaurav Chaudhary
