Dear Datastack Technologies Hiring Team,

I am applying for the Frontend Developer - React.js opening in Pune. Over three years of freelance delivery I have built and shipped production React and Next.js frontends end to end.

Recent production work that maps to the role:

- Frontend for a live logistics platform (Cashbackwallah, cashbackwallah.com): a Next.js 16 and TypeScript client integrated against 145 REST endpoints backed by 23 Prisma models, covering courier rate comparison, booking, order management, and a multi-level franchise commission flow with role-based access; 1,000+ orders processed.
- Instant-panel admin dashboards (panel5.logicpay.in, open source): real-time dashboards, fraud alerts, and a role-based access control UI over a 107-endpoint API kept fast by Redis-cached hot reads.
- Real-time UI for Dream10.in: live leaderboards and WebSocket-driven screens wired to automated payment and payout flows.

Your posting asks for a developer who understands the reasoning behind technical decisions rather than simply following established patterns. Working independently has made that unavoidable: on every project I chose the stack, set the coding standards, designed the reusable components, and reviewed my own changes against production consequences, so every standard, every component, and every review before production was mine. Delivery ran in short iterations (demo to the client, take feedback, ship the next slice), which is the freelance version of the Agile cadence your team works in.

Two things I will state plainly: most of my production state management has been hooks, Context API, and Zustand, so I expect a short ramp into Redux or MobX, and my styling is in CSS3, Tailwind CSS, and Material UI rather than SASS, where the same component discipline carries over. I have not yet formally led a team; mentoring is the part of this role I most want to grow into.

Datastack turns pharma and healthcare data into actionable insights, and data-dense screens are where frontend ownership matters most: a slow query, a broken state, or an unclear table shows up immediately to the person making a decision from it. A small frontend team also makes the leadership path the posting describes a near-term reality rather than a distant promise.

I am based in Mathura, Uttar Pradesh, and will relocate to Pune. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
