Dear Hiring Manager,

I am applying for the Front End Developer - ReactJs role in Gurugram. For over three years of freelance delivery I have built React and Next.js interfaces for products where consent, document and money state have to stay correct on screen: KYC-gated order steps, wallet and ledger views, live WebSocket leaderboards, fraud-detection dashboards, and role-based admin panels.

How my work maps to your stack:

- ReactJS and Next.js: React 19 and Next.js 15/16 in production, including a Next.js 16 client against a 145-endpoint backend, plus component libraries of 80, 63 and 45 components.
- Store management: Zustand for client state and TanStack Query for server state, with cache invalidation in data-heavy dashboards.
- HTML5, CSS3 and JavaScript: TypeScript and modern JavaScript as primary languages, responsive Tailwind CSS and Material UI builds shipped to live users.
- Performance and developer experience: Chrome DevTools for layout, re-render and load work, Postman for API contracts, Git with GitHub Actions CI, and data structures practised to LeetCode 1,430.

The consent surface is where I most want to work. Leegality was engaged by Union Bank of India in July 2026 to implement Consentin for DPDP compliance, with cookie consent live on the bank's corporate site, and the DPDP deadline of May 13, 2027 puts consent journeys, privacy centres and audit-ready forms on the front-end roadmap. I have built gated steps and fraud-detection views where one wrong screen state costs real money, and I would bring that discipline to your document and consent interfaces.

Straight about what I do not have yet. Store management is my strongest match in Zustand and TanStack Query rather than Redux, so your Redux conventions are the one thing I would be picking up rather than already knowing. I have not worked from Figma files or produced wireframes using AI tools; my interface design has happened in Tailwind CSS and Material UI alongside the client, and I would adopt your handoff process as it exists. I have shipped responsive layouts to real users, but not under a formal pixel-perfect review step or an accessibility audit, and my delivery has been solo client work with feedback over chat and calls rather than Agile sprint ceremonies in Jira.

I am based in Mathura, Uttar Pradesh, and am ready to relocate to Gurugram for your hybrid cadence. My B.Tech at GLA University runs to 2027, and over three years of client delivery has already been scheduled around it. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
