Dear NuSwipe hiring team,

I am applying for the Frontend Developer - React.js / Next.js role. I have spent over three years freelancing on production React and Next.js platforms for transaction-heavy products: wallets, ledgers, referral commissions, and payout flows. That maps directly onto NuSwipe, because gift card, rewards, and loyalty platforms run on the same transaction-based dashboards, forms, and tables I have shipped for paying clients.

How my work maps to your requirements:

- Production React/Next.js: built the Next.js 16 frontend of cashbackwallah.com against a 145-endpoint Express.js backend; order tables, filters, booking flows, and commission dashboards with 1,000+ orders processed.
- Auth and role-based interfaces: protected routes with Firebase OTP, Auth0, and JWT, and separate admin, franchise, and customer tiers driven by role-based access control (panel5.logicpay.in).
- State management and API handling: Zustand and TanStack Query with hooks and lifecycle patterns, and careful loading, error, and edge-case states against live payment flows including Razorpay signature verification.
- Clean, reusable UI: TypeScript as my primary language, Tailwind CSS and Material UI for responsive, multi-device interfaces, including an 80-component project and my portfolio at gauravmrjatt.vercel.app.

Two things worth being upfront about: I have worked solo, so I have not been handed Figma files or sat in team code reviews. My UI work has been design-and-build with Tailwind and Material UI, and my review discipline comes from maintaining open-source repos with CI. Cross-browser checks in my work have come from real users on live sites rather than a formal QA pass, and performance work has meant Redis caching of hot reads and resumable uploads rather than bundle tuning. I would expect both to get sharper inside your team's workflow.

On location: I am based in Mathura, Uttar Pradesh, and Delhi NCR is exactly where I want to build my career, so I am ready to relocate and work on-site from either the Aerocity, New Delhi or the Gurugram office. I am in the final years of my B.Tech in CSE at GLA University (expected 2027), which my freelance schedule already accommodates alongside full-time work.

Kind regards,

Gaurav Chaudhary
