Dear Qode Advisors Hiring Team,

I am applying for the Junior Full Stack Developer position in Mumbai. I have built and maintained production web applications as a freelance developer in React, Next.js, Node.js, and TypeScript for over three years, and the posted scope, developing scalable web applications and responsive user interfaces, is exactly the work I already do for my clients. I am comfortable working independently once clear specifications are in place.

What I would bring to your applications:

- Full-stack delivery: I built and shipped a logistics platform (Next.js, Express.js, Prisma, PostgreSQL) with courier comparison, shipment booking, and a franchise commission system; it has processed 1,000+ orders across 145 REST endpoints.
- Responsive UI: I work daily in React 19 and Next.js 15/16 with Tailwind CSS, building mobile-friendly dashboards, forms, and onboarding flows that hold up on small screens.
- Independent ownership: as a solo freelancer I take a feature from schema and API through UI, integrations, deployment, and monitoring, with CI/CD on GitHub Actions and observability via Sentry.
- Data layer: production experience with PostgreSQL and MongoDB using Prisma and Mongoose, plus Redis for caching and background processing.

I am drawn to Qode Advisors because the role asks for exactly what I do best: shipping full-stack features with clear specifications, across a modern web stack, and learning the domain deeply as I go. I bring a strong computer science foundation (B.Tech CSE, expected 2027) and a 1,430 LeetCode contest rating, and I am a motivated, curious developer who closes tool gaps quickly on live systems.

I am based in Mathura, Uttar Pradesh, and I am open to relocating to Mumbai for this role.

Kind regards,

Gaurav Chaudhary
