Dear Voiceoc Hiring Team,

I am applying for the Full Stack Developer (NodeJS) position. I have built and maintained production full-stack applications in Node.js, React.js, and MongoDB-familiar stacks for over three years as a freelance developer, and the scope you describe, building a sophisticated platform with NodeJS, React.js, and MongoDB, integrating third-party services, and ensuring web security, matches the work I already do.

What I would bring to your platform:

- MERN stack delivery: I built a full-stack logistics platform from scratch (Next.js 16, React, TypeScript, Express.js, Prisma, PostgreSQL) with 145 REST endpoints and 1,000+ orders processed. I am proficient in React.js, Node.js, Express, and RESTful APIs, with working knowledge of MongoDB from an earlier rewards platform and a file manager project.
- Third-party integrations: I integrated Razorpay (payment gateway with signature verification), Shiprocket (courier), Firebase OTP, and email/webhook flows into production systems. I understand payment gateway integration, webhook processing, and API security.
- Databases and caching: I work with PostgreSQL (primary), MySQL, MongoDB, and Redis (caching, pub/sub). I have experience with Redis and Memcached-familiar patterns, query optimization, and managing high-load applications.
- DevOps and cloud: I containerize services with Docker, deploy on AWS EC2 and Linux with NGINX, and manage CI/CD with GitHub Actions. I am comfortable with cloud server setup and management.
- Web security: I implement JWT and Auth0-backed authentication, role-based access control, payment signature verification, KYC-gated flows, and automated fraud detection. I understand TLS/SSL, web sockets, and secure coding practices.

I am based in Mathura, Uttar Pradesh, and am ready to relocate to the Delhi NCR region as required. I look forward to hearing from you.

Kind regards,

Gaurav Chaudhary
