Gaurav Chaudhary

Mathura, Uttar Pradesh, India

Phone: +91-8077598311 | Email: gauravmrjatt4@gmail.com | LinkedIn | GitHub | Portfolio

Junior Software Development Engineer with three-plus years of freelance production delivery in TypeScript, Node.js, and React, building large-scale backend services: a 145-endpoint Express/Prisma/PostgreSQL platform processing 1,000+ orders, high-concurrency event systems on Redis and RabbitMQ, and Node.js Cluster workers, each owned from schema through deployment, CI/CD, and monitoring. B.Tech CSE in progress (expected 2027); LeetCode 1,430 contest rating.

Education

GLA University **Mathura, India**
B.Tech, Computer Science and Engineering *2023-2027*
In progress, expected 2027. Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Core Competencies

Languages: TypeScript, JavaScript, Python, Java, SQL, PHP | **Backend & Services:** Node.js, Express.js, REST, GraphQL (Apollo), WebSockets, JWT, OAuth (Auth0, consumer side), RabbitMQ, Kafka, Redis, Node.js Cluster | **Frontend:** React 19, Next.js 15/16, TypeScript, Tailwind CSS, Material UI, Zustand, TanStack Query | **Data:** PostgreSQL, MongoDB, MySQL, Redis; Prisma, Mongoose, Zod | **DevOps & Cloud:** Git, Docker, NGINX, GitHub Actions CI/CD, AWS EC2, Linux, Coolify | **Fundamentals & Observability:** DSA, OOP, DBMS, OS, Computer Networks; Prometheus, Grafana, Loki, Sentry; automated test suites

Professional Experience

Cashbackwallah - Remote / client project
Freelance Full-Stack Developer *Jan 2026 - Aug 2026*

- Designed and built a production logistics platform from scratch (Next.js, TypeScript, Express.js, Prisma, PostgreSQL): courier rate comparison, shipment booking, order management, and a multi-level franchise commission system - 1,000+ orders processed across 145 REST endpoints and 23 database models.
- Implemented the money-movement layer end to end: wallet and transaction ledger, KYC-gated order paths, automated payouts, webhook processing, and scheduled refund workflows, with Razorpay payment signature verification on every callback.
- Built and optimized RESTful APIs for Shiprocket courier integrations (rate comparison, booking, webhook handling), Firebase OTP, and Redis-backed caching, keeping hot booking and rate-comparison reads off the primary database under live traffic.
- Handled deployment and DevOps for the platform end to end: Docker-based services, CI/CD on AWS EC2, and Sentry error monitoring on the live system.
- The backend is open source (github.com/Gauravmrjatt/cheapship, about 59,000 lines), so a reviewer can read the API structure, Prisma schema, and query work directly. Demo: cashbackwallah.com

Dream10.in - Remote / client project
Freelance Full-Stack Developer *Mar 2025 - Nov 2025*

- Built fault-tolerant Node.js services for a real-time quiz platform serving high-concurrency events: Redis caching and pub/sub, a RabbitMQ queue for scoring and payout jobs, and WebSocket endpoints feeding live leaderboards, with anti-cheat checks on submitted answers.
- Implemented automated payment and payout processing with retry-safe queue consumers, so a slow downstream payment call never blocked a live game request.
- Owned CI/CD deployment and Docker-based service configuration for each partner-facing event build. Demo: dream10.in

Lead Tracking System - Remote / client project
Freelance Full-Stack Developer (Ongoing Maintenance) *May 2023 - Present*

- Originally built a production affiliate lead-tracking platform in 2023 and still maintain and extend it: 107 REST endpoints, 12 database models, and about 31,000 lines, handling webhook and postback ingestion from partner networks around the clock.
- Runs distributed background processing with a RabbitMQ payout queue, Redis-cached hot reads, and Node.js Cluster workers, keeping slow payout jobs off the request path.
- Implemented JWT and Auth0-backed authentication with role-based access control, automated fraud detection, and Telegram alerting; added an automated test suite (10 test files) and monitoring with Prometheus, Grafana, Loki, and Sentry. Demo: panel5.logicpay.in

Selected Projects

- **School** (Nov 2025 - Present): school management API on Apollo GraphQL with WebSocket subscriptions over 10 Prisma models; Kafka carries attendance, exam-result, and payment events, Redis pub/sub fans results out. Repo: github.com/Gauravmrjatt/School
- **CodeLab** (Jun 2025): collaborative coding platform on Node.js and Express with WebSockets, CRDT editing, and a Docker-sandboxed judge (Node, Python, Java, C++); about 32,000 lines across 23 routes. Repo: github.com/Gauravmrjatt/Codellab
- **OSM Fortress** (May 2026): gift-code distribution service with 66 routes and about 58,000 lines, gated by proof-of-work checks, anti-scraping layers, and device fingerprints. Repo: github.com/Gauravmrjatt/osm-forest
- **Data Vault** (Mar 2025): privacy-focused file manager on Next.js, Node.js, and MongoDB with chunk-based encrypted storage, resumable uploads, and secure file sharing. Repo: github.com/Gauravmrjatt/datavault

Honors and Awards

- **AWS Cloud Computing Certification** - JOVAC, GLA University & Technical Guftgu (2025).
- **Finalist** - WebX Frontend Challenge (2024); **4th place** - WebForge national-level web development competition (2025); **4th place** - Code Arambh (2024).
- **LeetCode** - 1,430 contest rating.

Languages: Hindi (native), English (professional working proficiency).
