Gaurav Chaudhary

Mathura, Uttar Pradesh, India

Phone: +91-8077598311 | Email: gauravmrjatt4@gmail.com | LinkedIn | GitHub | Portfolio

Backend Developer working in Node.js, ES6+ and TypeScript, with over three years of freelance production delivery. Built and maintain a 145-endpoint Express.js and PostgreSQL backend with 23 Prisma models that has processed 1,000+ live orders, a 107-endpoint lead-tracking platform with Redis-cached hot reads and a RabbitMQ payout queue, and fault-tolerant Node.js services for high-concurrency events. Owns server-side work end-to-end: API design, schema and query work, JWT and Auth0-backed authentication, webhook processing, message queues, automated tests, CI/CD with Docker, and Prometheus, Grafana, Loki and Sentry observability. B.Tech CSE in progress, expected 2027; LeetCode 1,430 contest rating.

Education

GLA University **Mathura, India**
B.Tech, Computer Science and Engineering *2023-2027*
In progress, expected 2027. Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Core Competencies

Backend Development: Node.js, JavaScript (ES6+), TypeScript and Express.js, designing, implementing and maintaining server-side applications that run in production today | **RESTful APIs & GraphQL:** production REST API design across two backends of 145 and 107 endpoints, Apollo GraphQL APIs with WebSocket subscriptions, and webhook and postback handling for payment and partner events | **Databases & Query Work:** PostgreSQL (primary), MySQL and MongoDB with Prisma and Mongoose; schema design, query tuning and Redis caching of hot reads across a 23-model logistics schema and a 12-model tracking schema | **Message Queues & Event-Driven Services:** RabbitMQ queues for payout processing, Kafka event streaming, Redis pub/sub, WebSockets and Node.js Cluster; decoupled, fault-tolerant microservices and distributed-systems work split across API servers, workers and scheduled jobs | **Authentication & Authorization:** JWT and Auth0-backed flows, role-based access control, payment signature verification, KYC-gated order paths and automated fraud detection | **Testing, CI/CD, Containers & Observability:** an automated unit and integration test suite kept passing in a production repository, Docker containerization, GitHub Actions CI/CD, AWS EC2, NGINX and Linux; Prometheus, Grafana, Loki and Sentry monitoring

Professional Experience

Cashbackwallah - Remote / client project
Freelance Full-Stack Developer *Jan 2026 - Aug 2026*

- Designed and built the backend for a production logistics platform from scratch in Express.js, TypeScript, Prisma and PostgreSQL: 145 REST endpoints and 23 database models serving courier rate comparison, shipment booking, order management and a multi-level franchise commission system, with 1,000+ orders processed.
- Implemented the money-movement layer end to end: a wallet and transaction ledger, KYC-gated order paths, automated payouts, webhook processing and scheduled refund workflows, with Razorpay payment signature verification on every callback.
- Containerized services with Docker and ran CI/CD deployment on AWS EC2 and Linux, owning deployment and DevOps end to end with Sentry error monitoring. Demo: cashbackwallah.com
- The backend is open source (github.com/Gauravmrjatt/cheapship, about 59,000 lines), which is where a reviewer can read the API structure, Prisma schema and query work directly.

Dream10.in - Remote / client project
Freelance Full-Stack Developer *Mar 2025 - Nov 2025*

- Built fault-tolerant Node.js services for a real-time quiz platform serving high-concurrency events: Redis caching and pub/sub, a RabbitMQ queue for scoring and payout jobs, and WebSocket endpoints feeding live leaderboards.
- Implemented automated payment and payout processing with retry-safe queue consumers, so a slow downstream payment call never blocked a live game request.
- Owned CI/CD deployment and Docker-based service configuration for the release of each partner-facing event build. Demo: dream10.in

Lead Tracking System - Remote / client project
Freelance Full-Stack Developer (Ongoing Maintenance) *May 2023 - Present*

- Originally built a production affiliate lead-tracking platform in 2023 and still maintain and extend it: 107 REST endpoints, 12 database models and about 31,000 lines, handling webhook and postback ingestion from partner networks around the clock.
- Runs distributed background processing with a RabbitMQ payout queue, Redis-cached hot reads and Node.js Cluster workers, keeping slow payout jobs off the request path.
- Implemented JWT and Auth0-backed authentication with role-based access control, automated fraud detection and Telegram alerting for operations.
- Set up and maintained automated unit and integration tests, a 10-file suite kept passing alongside ongoing changes.
- Deployment and monitoring ran on AWS EC2 and Linux with NGINX and Coolify; container work is Docker. Production monitoring uses Prometheus metrics, Grafana dashboards, Loki log aggregation and Sentry, supporting root-cause analysis of live incidents. Demo: panel5.logicpay.in

Selected Projects

- **School** (Nov 2025 - Present): school management API on Apollo GraphQL with WebSocket subscriptions over 10 Prisma models; Kafka carries attendance, exam-result and payment events and Redis pub/sub fans results out to subscribers. github.com/Gauravmrjatt/School
- **CodeLab** (Jun 2025): collaborative coding platform on Node.js and Express with WebSockets and CRDT editing, and a Docker-sandboxed judge that runs Node, Python, Java and C++ submissions; about 32,000 lines across 23 routes. github.com/Gauravmrjatt/Codellab

Honors and Awards

- **AWS Cloud Computing Certification** - JOVAC, GLA University & Technical Guftgu (2025).
- **Finalist** - WebX Frontend Challenge (2024); **4th place** - WebForge national-level web development competition (2025).
- **LeetCode** - 1,430 contest rating.
