Gaurav Chaudhary

Mathura, Uttar Pradesh, India

Phone: +91-8077598311 | Email: gauravmrjatt4@gmail.com | LinkedIn | GitHub | Portfolio

Backend-first Full-Stack Developer with over three years delivering production systems in Node.js, TypeScript, and React: REST and GraphQL API design, event-driven services on RabbitMQ, Kafka, and Redis, authentication, payments, and observability. Owned live platforms end-to-end, from schema through deployment and monitoring, including a 145-endpoint Express/TypeScript backend behind a logistics product that has processed 1,000+ orders. B.Tech CSE in progress, expected 2027; LeetCode 1,430 contest rating.

Education

GLA University **Mathura, India**
B.Tech, Computer Science and Engineering *2023-2027*
In progress, expected 2027. Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Core Competencies

Backend (primary focus): Node.js, Express.js, TypeScript, REST API design, Apollo GraphQL with WebSocket subscriptions, fault-tolerant services scaled with Node.js Cluster | **Event-driven and background services:** production async services coordinated over RabbitMQ queues and Kafka event streams; Redis caching and pub/sub; WebSockets and Socket.IO for real-time features | **Frontend:** React, Next.js 15/16, TypeScript, JavaScript (ES6+), React Hooks, Zustand, TanStack Query, Tailwind CSS, Material UI; responsive UI development for live products | **Authentication & secure development:** JWT plus Auth0 for delegated login, role-based access control, Razorpay payment signature verification, KYC-gated flows, automated fraud detection, webhook and postback handling | **Databases:** PostgreSQL (primary), MySQL, MongoDB; Prisma and Mongoose ORMs; production schema design (23-model logistics platform, 12-model lead-tracking platform); Redis-cached hot reads | **Docker, CI/CD & observability:** Docker, NGINX, GitHub Actions pipelines, AWS EC2, Linux; monitoring and logging with Prometheus, Grafana, Loki, Sentry; automated test suites maintained in production repositories

Professional Experience

Cashbackwallah - Remote / client project
Freelance Full-Stack Developer *Jan 2026 - Aug 2026*

- Designed and built a production logistics platform backend: 145 REST endpoints on Express.js and TypeScript with Prisma and PostgreSQL (23 models) serving a Next.js 16 client; the open-source codebase (about 59,000 lines) covers courier rate comparison, shipment booking, order management, and a multi-level franchise commission system, and has processed 1,000+ orders.
- Implemented Shiprocket, Razorpay, Firebase OTP, Redis, and Sentry integrations: payment signature verification, wallet and transaction ledger, KYC-gated orders, automated payouts, webhook processing, and scheduled refund workflows.
- Owned the platform's end-to-end deployment and DevOps in production, including its Sentry error monitoring. Demo: cashbackwallah.com

Dream10.in - Remote / client project
Freelance Full-Stack Developer *Mar 2025 - Nov 2025*

- Built the backend of a production real-time quiz platform on Node.js, Redis, RabbitMQ, and WebSockets: fault-tolerant async services for high-concurrency event handling, live leaderboards, anti-cheat mechanisms, and automated payment and payout processing.
- Owned CI/CD deployment and the real-time delivery path to partner integrations. Demo: dream10.in

Lead Tracking System - Remote / client project
Freelance Full-Stack Developer (Ongoing Maintenance) *May 2023 - Present*

- Originally built a production affiliate lead-tracking platform in 2023 and continue to maintain and extend it: real-time dashboards, automated fraud detection, webhook/postback handling, payment processing, Telegram alerts, and role-based access control.
- The open-source codebase (github.com/Gauravmrjatt/instant-panel) runs about 31,000 lines with 107 REST endpoints, 12 models, and a 10-file automated test suite maintained alongside ongoing changes.
- Scaled background processing with RabbitMQ, Redis, and Node.js Cluster: a RabbitMQ-based payout queue keeps slow payouts from blocking requests, and Redis caches hot reads to cut database load.
- Production monitoring with Prometheus, Grafana, and Loki supports root-cause troubleshooting of live issues. Demo: panel5.logicpay.in

Selected Projects

- **School** (Nov 2025 - Present): school management API using Apollo GraphQL with WebSocket subscriptions over 10 Prisma models; Kafka carries attendance, exam-result, and payment events, Redis pub/sub fans results out. Repo: github.com/Gauravmrjatt/School
- **CodeLab** (Jun 2025): collaborative coding platform with a Docker-sandboxed judge executing Node, Python, Java, and C++ submissions, CRDT-based real-time multi-user editing over WebSockets, and contest management; about 32,000 lines. Demo: codelab.logicpay.in
- **OSM Fortress** (May 2026): gift-code distribution service with proof-of-work gating, anti-scraping layers, and device fingerprints; 66 routes, about 58,000 lines. Repo: github.com/Gauravmrjatt/osm-forest
- **Data Vault** (Mar 2025): privacy-focused file manager (Next.js, Node.js, MongoDB, Telegram Bot API) with chunk-based encrypted storage, resumable uploads, and 80 reusable components. Demo: datavault-two.vercel.app
- **TicketHub** (2025): Next.js 15 + React 19 ticketing app with 16 endpoints and 5 Prisma models. Demo: ticket-hub-ten.vercel.app

Honors and Awards

- **AWS Cloud Computing Certification** - JOVAC, GLA University & Technical Guftgu (2025).
- **Finalist** - WebX Frontend Challenge (2024); **4th place** - WebForge national web development competition (2025); **4th place** - Code Arambh (2024).
- **LeetCode** - 1,430 contest rating.
