Gaurav Chaudhary

Mathura, Uttar Pradesh, India

Phone: +91-8077598311 | Email: gauravmrjatt4@gmail.com | LinkedIn | GitHub | Portfolio

React JS Developer with three years of freelance delivery building production React and Next.js interfaces for responsive, scalable web apps across logistics, real-time quiz and affiliate tracking products. React 19 and TypeScript as the primary stack, with modern JavaScript (ES6+), Tailwind CSS and Material UI. B.Tech CSE in progress, expected 2027; open to relocation to Bengaluru.

Education

GLA University **Mathura, India**
B.Tech, Computer Science and Engineering *2023-2027*
In progress, expected 2027. Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Core Competencies

React.js / Modern JavaScript: React 19 and Next.js 15/16 in production - hooks, component lifecycle, client routing, and reusable component libraries (80-component Data Vault, 63-component portfolio, 45-component Tod AI) | **JavaScript and TypeScript:** modern JavaScript (ES6+) and TypeScript as the primary languages across every shipped codebase, including a 59,000-line Next.js 16 client and a 31,000-line tracking platform, with typed props and API contracts | **Responsive Web Apps:** Tailwind CSS and Material UI for multi-device layouts across consumer and admin surfaces; HTML5 and CSS3 | **State Management:** Zustand for client state and TanStack Query for server state; React Context and hooks | **Scalable Products:** front ends wired to backends of 145 and 107 REST endpoints; role-based views; explicit loading, empty and error states; async data flow and error handling | **Testing & Quality:** a 10-file automated test suite on a live platform; GitHub Actions CI/CD; Sentry and Prometheus/Grafana for production debugging | **Tooling & DevOps:** Git, Docker, Redis caching; LeetCode 1,430 contest rating

Professional Experience

Cashbackwallah - Remote / client project
Freelance Full-Stack Developer *Jan 2026 - Aug 2026*

- Built the production front end in Next.js 16 and TypeScript for a logistics platform (1,000+ orders processed): courier rate comparison screens, shipment booking flows, order tables with filters and pagination, and franchise commission dashboards. Demo: cashbackwallah.com
- Integrated the React client with a 145-endpoint Express backend: wallet and transaction ledger views, payout and refund status screens, and explicit loading, empty and error states against live payment flows.
- Managed client state and shared component patterns across customer, franchise and admin tiers, with Firebase OTP and JWT protected routes and role-differentiated views.
- Kept money-touching screens correct rather than merely rendered: KYC-gated order steps, Razorpay signature-verified payment states, and error handling that never leaves a balance or ledger view inconsistent. Open source: github.com/Gauravmrjatt/cheapship

Dream10.in - Remote / client project
Freelance Full-Stack Developer *Mar 2025 - Nov 2025*

- Shipped the real-time quiz front end in Next.js and JavaScript for partner platforms: live leaderboards streamed over WebSockets, question timers, answer flow states, anti-cheat surfaces and result screens. Demo: dream10.in
- Built reusable component primitives (question cards, timer bars, score panels, modal dialogs) shared across partner-branded builds, with responsive layouts that held up on mobile and desktop.
- Tuned the update path for high-concurrency events so score panels stayed consistent and interactive; owned CI/CD deployment and production debugging.

Lead Tracking System - Remote / client project
Freelance Full-Stack Developer (Ongoing Maintenance) *May 2023 - Present*

- Originally built in 2023 and still maintain the interfaces of an affiliate lead-tracking platform: real-time dashboards, lead tables with filters, automated fraud-detection views, webhook/postback status screens and Telegram alert settings. Demo: panel5.logicpay.in
- Built role-based access control views for admin, partner and client tiers, so the same data layer renders different permitted surfaces without duplicated components.
- Maintain a 31,000-line open-source codebase (107 endpoints) for extensibility: a 10-file automated test suite, Redis-cached hot reads and a RabbitMQ payout queue, with Prometheus, Grafana and Loki for monitoring. github.com/Gauravmrjatt/instant-panel

Selected Projects

- **Data Vault** (Mar 2025): privacy-focused file manager in Next.js, an 80-component build with encrypted chunked storage, resumable upload progress, secure sharing, search, pagination and folder organisation. Demo: datavault-two.vercel.app
- **CodeLab** (Jun 2025): browser code editor with CRDT-based real-time multi-user editing (Yjs), customizable layouts, contest timers and invite-based collaboration rooms over WebSockets; about 32,000 lines. Demo: codelab.logicpay.in
- **TicketHub and EcoFinds**: TicketHub in Next.js 15 with React 19 (16 endpoints, 5 models) and EcoFinds, a live marketplace front end, both built as component-first responsive interfaces.
- **Portfolio** (2025): personal site in Next.js with a 63-component library, responsive navigation, project case studies and contact flows. Live: gauravmrjatt.vercel.app
- **Tod AI** (2025): task and note-taking app with a 45-component interface, live in production.

Honors and Awards

- **Finalist** - WebX Frontend Challenge (2024), a frontend competition run by a competitive coding community.
- **4th place** - WebForge (2025), national-level web development competition; **4th place** - Code Arambh (2024).
- **AWS Cloud Computing Certification** - JOVAC, GLA University and Technical Guftgu (2025); **LeetCode** - 1,430 contest rating.
