Gaurav Chaudhary

Mathura, Uttar Pradesh, India

Phone: +91-8077598311 | Email: gauravmrjatt4@gmail.com | LinkedIn | GitHub | Portfolio

Full-Stack Engineer with over three years of experience owning production web applications end-to-end in React, TypeScript, Next.js, and Node.js, from frontend architecture and rendering through APIs, background jobs, caching, and deployment. Shipped a real-time quiz platform to partners and a logistics platform that has processed 1,000+ orders, plus dashboards and live leaderboards built on WebSocket updates and Redis-cached reads. B.Tech CSE in progress, expected 2027; LeetCode 1,430 contest rating. Looking to bring that end-to-end ownership to consumer health products used at scale.

Education

GLA University **Mathura, India**
B.Tech, Computer Science and Engineering *2023-2027*
In progress, expected 2027. Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Core Competencies

Frontend Architecture & Performance: TypeScript, JavaScript, React 19, Next.js 15/16, Zustand, TanStack Query, Tailwind CSS, Material UI. Built production Next.js clients, including a Next.js 16 client over a 145-endpoint logistics backend and live leaderboards updating over WebSockets in a quiz platform shipped to partners | **APIs & Background Jobs:** Node.js, Express.js, REST API design (145 endpoints on one platform, 107 on another), Apollo GraphQL with WebSocket subscriptions, webhook and postback handling, scheduled refund and payout workflows | **Concurrency, Caching & Distributed Systems:** RabbitMQ message queues (payout queue so slow jobs never block requests), Kafka event streaming, Redis caching of hot reads and pub/sub, Node.js Cluster, fault-tolerant services for high-concurrency event handling | **Databases & SQL/NoSQL:** PostgreSQL with Prisma (23-model production schema), MongoDB, MySQL; schema and query work behind Redis-cached hot read paths | **Deployment, DevOps & Observability:** Docker, GitHub Actions CI/CD, AWS EC2, NGINX, Linux, Coolify; Prometheus, Grafana, Loki, and Sentry on live systems | **Engineering Fundamentals:** DBMS, Operating Systems, Computer Networks, data structures (LeetCode 1,430 contest rating); automated test suites in production repos; AI-assisted development tools

Professional Experience

Cashbackwallah - Remote / client project
Freelance Full-Stack Developer *Jan 2026 - Aug 2026*

- Built and deployed a production logistics platform from scratch in Next.js, TypeScript, Express.js, Prisma, and PostgreSQL: courier rate comparison, shipment booking, order management, and a multi-level franchise commission system; the platform has processed 1,000+ orders.
- Built the Next.js 16 frontend client in TypeScript against a 145-endpoint backend; the open-source codebase (github.com/Gauravmrjatt/cheapship) spans about 59,000 lines with 23 Prisma models behind the client.
- Implemented Shiprocket, Razorpay, Firebase OTP, Redis, and Sentry integrations: payment signature verification, wallet and transaction ledger, KYC-gated orders, automated payouts, webhook processing, and scheduled refund workflows.
- Handled end-to-end deployment and DevOps for the platform. Demo: cashbackwallah.com

Dream10.in - Remote / client project
Freelance Full-Stack Developer *Mar 2025 - Nov 2025*

- Shipped a production real-time quiz platform to partners using Next.js, Node.js, Redis, RabbitMQ, and WebSockets, with live leaderboards updating over WebSockets, anti-cheat mechanisms, and automated payment and payout processing.
- Built fault-tolerant services for high-concurrency event handling and managed CI/CD deployment, including Redis/RabbitMQ-based processing and real-time WebSocket communication. Demo: dream10.in

Lead Tracking System - Remote / client project
Freelance Full-Stack Developer (Ongoing Maintenance) *May 2023 - Present*

- Originally built a production affiliate lead-tracking platform in 2023 and continue to maintain and extend it: real-time dashboards, automated fraud detection, webhook/postback handling, payment processing, Telegram alerts, and role-based access control.
- The open-source codebase (github.com/Gauravmrjatt/instant-panel) runs about 31,000 lines with 107 REST endpoints and 12 models, and a 10-file automated test suite maintained alongside ongoing changes.
- Scaled background processing with RabbitMQ, Redis, and Node.js Cluster: a RabbitMQ payout queue keeps slow payouts from blocking requests, and Redis caches hot reads to cut database load.
- Supported production reliability with Prometheus, Grafana, and Loki monitoring for root-causing live issues. Demo: panel5.logicpay.in

Selected Projects

- **School** (Nov 2025 - Present): school management API using Apollo GraphQL with WebSocket subscriptions over 10 Prisma models; Kafka carries attendance, exam-result, and payment events, Redis pub/sub fans results out. Repo: github.com/Gauravmrjatt/School
- **CodeLab** (Jun 2025): collaborative coding platform with WebSockets, CRDT-based multi-user editing, and a Docker-sandboxed judge; about 32,000 lines with 23 routes. Demo: codelab.logicpay.in
- **TicketHub**: event ticketing app built on Next.js 15 and React 19, 16 endpoints and 5 models, live on Vercel. Demo: ticket-hub-ten.vercel.app
- **Data Vault** (Mar 2025): privacy-focused file manager (Next.js, Node.js, MongoDB, Telegram Bot API) with chunk-based encrypted storage, resumable uploads, and 80 reusable components. Demo: datavault-two.vercel.app
- **OSM Fortress** (May 2026): gift-code distribution service with proof-of-work gating, anti-scraping layers, and device fingerprints; 66 routes, about 58,000 lines. Repo: github.com/Gauravmrjatt/osm-forest

Honors and Awards

- **AWS Cloud Computing Certification** - JOVAC, GLA University & Technical Guftgu (2025).
- **Finalist** - WebX Frontend Challenge (2024); **4th place** - WebForge national-level web development competition (2025); **4th place** - Code Arambh (2024).
- **LeetCode** - 1,430 contest rating.

Languages: Hindi (native), English (professional working proficiency).
