Gaurav Chaudhary

Mathura, Uttar Pradesh, India

Phone: +91-8077598311 | Email: gauravmrjatt4@gmail.com | LinkedIn | GitHub | Portfolio

Backend Developer working in Node.js, TypeScript, and Express.js with over three years of freelance production delivery. Built and maintain a 145-endpoint Express/Prisma/PostgreSQL backend with wallet and transaction ledgers, webhook processing, automated payouts, and scheduled refund workflows. Owns async programming patterns, multiple database integrations (PostgreSQL, MongoDB, MySQL, Redis), JWT and Auth0 authentication, and deployment pipelines. Open-source contributor with two production platforms on GitHub (59,000 and 31,000 lines). B.Tech CSE in progress, expected 2027; LeetCode 1,430 contest rating.

Education

GLA University **Mathura, India**
B.Tech, Computer Science and Engineering *2023-2027*
In progress, expected 2027. Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks.

Core Competencies

Backend Development: Node.js and frameworks (Express.js), JavaScript (ES6+), TypeScript; server-side application design, implementation, and maintenance in production | **Asynchronous Programming:** event loop, callbacks, promises, async/await; RabbitMQ queues, Redis pub/sub, Node.js Cluster, fault-tolerant async services | **Databases & Integration:** PostgreSQL, MySQL, MongoDB with Prisma and Mongoose; integration of multiple data sources into one system; Redis caching of hot reads | **Authentication & Authorization:** JWT, Auth0-backed flows, role-based access control, payment signature verification, KYC-gated order paths, automated fraud detection | **Front-End Basics:** HTML5, CSS3, responsive web design, React, Next.js | **Security:** input validation, webhook processing, payment signature verification | **Testing, CI/CD & Deployment:** automated unit and integration test suites, Docker, GitHub Actions CI/CD, AWS EC2, Linux, NGINX, Coolify; Prometheus, Grafana, Loki, Sentry

Professional Experience

Cashbackwallah - Remote / client project
Freelance Full-Stack Developer *Jan 2026 - Aug 2026*

- Designed and built a production logistics platform backend from scratch in Express.js, TypeScript, Prisma, and PostgreSQL: 145 REST endpoints and 23 database models serving courier rate comparison, shipment booking, order management, and a multi-level franchise commission system, with 1,000+ orders processed.
- Implemented the money-movement layer end to end: a wallet and transaction ledger, KYC-gated order paths, automated payouts, webhook processing, and scheduled refund workflows, with Razorpay payment signature verification on every callback.
- Integrated multiple data sources (Shiprocket, Razorpay, Firebase OTP) into one system; built RESTful APIs for courier rate comparison, booking, and order tracking.
- Containerized services with Docker and ran CI/CD deployment on AWS EC2 and Linux, owning deployment and DevOps end to end with Sentry error monitoring. Demo: cashbackwallah.com

Dream10.in - Remote / client project
Freelance Full-Stack Developer *Mar 2025 - Nov 2025*

- Built fault-tolerant Node.js services for a real-time quiz platform serving high-concurrency events: Redis caching and pub/sub, a RabbitMQ queue for scoring and payout jobs, and WebSocket endpoints feeding live leaderboards.
- Implemented automated payment and payout processing with retry-safe queue consumers, so a slow downstream payment call never blocked a live game request.
- Owned CI/CD deployment and Docker-based service configuration for the release of each partner-facing event build. Demo: dream10.in

Lead Tracking System - Remote / client project
Freelance Full-Stack Developer (Ongoing Maintenance) *May 2023 - Present*

- Originally built a production affiliate lead-tracking platform in 2023 and still maintain and extend it: 107 REST endpoints, 12 database models, and about 31,000 lines, handling webhook and postback ingestion from partner networks around the clock.
- Implemented JWT and Auth0-backed authentication with role-based access control, automated fraud detection, and Telegram alerting for operations.
- Integration of multiple data sources (partner networks, payment gateways) into one system; maintained a 10-file automated test suite.
- Deployment and monitoring on AWS EC2 and Linux with NGINX and Coolify; container work is Docker. Production monitoring uses Prometheus, Grafana, Loki, and Sentry. Demo: panel5.logicpay.in

Selected Projects

- **School** (Nov 2025 - Present): school management API on Apollo GraphQL with WebSocket subscriptions over 10 Prisma models; Kafka carries attendance, exam-result, and payment events. Repo: github.com/Gauravmrjatt/School
- **CodeLab** (Jun 2025): collaborative coding platform on Node.js and Express with WebSockets, CRDT editing, and a Docker-sandboxed judge; about 32,000 lines across 23 routes. Repo: github.com/Gauravmrjatt/Codellab
- **OSM Fortress** (May 2026): gift-code distribution service with 66 routes and about 58,000 lines, gated by proof-of-work checks, anti-scraping layers, and device fingerprints. Repo: github.com/Gauravmrjatt/osm-forest

Honors and Awards

- **AWS Cloud Computing Certification** - JOVAC, GLA University & Technical Guftgu (2025).
- **Finalist** - WebX Frontend Challenge (2024); **4th place** - WebForge national-level web development competition (2025).
- **LeetCode** - 1,430 contest rating.
